API endpoint summary for events and festivals in Colorado for Colorado Information Marketplace and Gocode Event

[Events and Festivals in Colorado](#)

API endpoint for location, description, dates, and contact information for events and festivals in Colorado from the Colorado Tourism Office.

Available GET Parameters:

Parameter	Description	Type	Default value
start	The starting date for the range of events to be returned	String	'today'
end	The ending date for the range of events to	String	NULL

	be returned		
duration	The ending date for the range of events to be returned	String	'next week'
page	Returns all the results on the declared page.	Integer	1
pagesize	Determines that amount of events that can be displayed per page	Integer	50
ot	Output type (json, jsonh, xml, php)	String	'xml'
json	JSON with text header	json	N/A
jsonh	JSON with JSON header	json	N/A
xml	Extensive Markup Language	xml	N/A
php	Serialized php	php	N/A

Notes

Date strings can be anything that can be parsed by php's strtotime function. 'Today', 'Next Week', 'First Thursday of last Month', '2018-01-04' are valid. See this [documentation](#) for more information

start dates are automatically altered to start on the previous Monday, unless start actually falls on a Monday

* end and duration are similar, if both are passed, the greatest parsed date will be used. Duration is calculated from start date.

Examples

To return all events in February:

Start = '2018-02-01'

End = '2018-02-28' - sets range from Feb 1 to Feb 28

Pagesize = 100 - allows for up to 100 events to be displayed per page

<https://codataengine.milesmedia.com/api/feeds/events?start=2018-02-01&end=2018-02-28&pagesize=100>

To return all events from now through May:

Start = 'today' - default value

End = '2018-05-30' - sets range from the day of the GET request to May 30, 2018

Pagesize = 500 - allows for up to 500 events to be displayed per page

<https://codataengine.milesmedia.com/api/feeds/events?end=2018-05-30&pagesize=500>
